Overview

This year Grattan Institute again contributed the highest-quality policy research and ideas to public debate. We also strengthened our capability to communicate these ideas effectively to policy makers, opinion leaders, and the public through the media, presentations and events, and our website. This report examines each program’s contribution in detail.

Australian Perspectives

In the November 2013 report, *Balancing budgets: tough choices we need*, John Daley sets out a reform package that could add about $37 billion a year to Australian government budgets and help to tackle Australia’s growing budget crisis.

The package would broaden the GST to include fresh food and private spending on health and education, raise the age of access to superannuation and the Age Pension, remove the exemption of owner-occupied housing from the Age Pension assets test, and limit tax concessions on superannuation deposits. It could enable governments to tackle potential deficits of $60 billion a year in today’s dollars – or up to 4 per cent of GDP – by 2023.

In the lead up to the federal election, the Coalition declared that Australia faced a ‘budget emergency’. In a speech to the National Press Club in October 2013, Grattan CEO John Daley, showed how Australian governments have lived beyond their means for a decade. He discussed whether anything has changed since the election, and how governments should tighten their budgets as the mining boom slows.

In January, 2014, a two-day Grattan Institute workshop with 20 key policy makers and business and community sector leaders examined the question of intergenerational fairness, and what policies would ensure equity for Australians of all ages. The success of the third Grattan Gathering ensures that the event will be held again in subsequent years.

John Daley’s submission to the Commonwealth Government's Commission of Audit in March explained why brave decisions are needed to restore Australian budgets, and set out a reform package that would add $37 billion a year to the Commonwealth budget. In a policy brief also published as an opinion article in *The Australian*, John Daley showed that raising the age of access to the Age Pension would be a big step towards balancing budgets and making Australia fairer.

The May report, *Budget pressures on Australian governments 2014*, showed how unprecedented infrastructure spending by states and territories is contributing substantially to a $106 billion decline in their finances since 2006. The decline has
exacerbated the deteriorating position of Australian government budgets, which risk deficits of about 4.5 per cent of GDP within 10 years, on current trends.

The increase in government spending is driven above all by health spending, which has risen by more than $40 billion a year in real terms in the past 10 years. The cause is not the ageing population but the fact that people are seeing doctors more often, having more tests and operations, and taking more prescription drugs.

**Cities**

In 2013 Cities Program Director Jane-Frances Kelly spoke about the future of Sydney to an audience of more than 1000 in the NSW Government's annual Urban Conversations event at the Sydney Recital Hall.

In the October 2013 report, *Renovating housing policy*, Jane-Frances Kelly set out the case for major change to housing policy in Australia. Government tax and welfare policies, by favouring homeowners and property investors over people who rent, are increasing the divide between Australians who own housing and those who do not.

The divide is income-based and it is generational. While home ownership is stable or declining slightly in Australia, ownership rates are falling sharply among households with low incomes or aged under 45.

The report quantified major government outlays on the private housing system to reveal the cumulative impact of tax and welfare policies on housing, economic productivity and inequality in our cities.

The July 2014 report, *Mapping Australia’s economy: cities as engines of prosperity*, revealed that 80 per cent of the dollar value of all goods and services in Australia is produced on just 0.2 per cent of the nation’s land mass, nearly all of it in cities.

The combined central business districts of Sydney and Melbourne alone – 7.1 square kilometres – generate nearly 10 per cent of the value of goods and services produced in all of Australia, three times that produced by the agricultural sector.

But these small areas that generate most value are often a long commute from the fast-growing outer suburbs where many Australians live. For the sake of the economy and the fair go, we have to find ways either to enable more workers to live closer to these centres, or to reach them more quickly by road and public transport.

**Energy**

In the December 2013 report, *Shock to the system: dealing with falling electricity demand*, Energy Program Director Tony Wood explained how Australians are using less power but paying more for it, with potentially damaging consequences for the electricity system.

While the average household has consumed 7 per cent less power since 2006, its average power bill has gone up by more than 85 per cent: from $890 to $1660 a year. Falling electricity consumption is caused in large part by the decline of
manufacturing and a wider restructuring of the Australian economy over the past two decades, coupled with the rise of solar panels and new breeds of energy-efficient appliances.

The report argued that in response, governments must ensure that future network company investments better match future power needs, and begin the hard task of reforming electricity tariffs so that they better reflect the costs companies incur.

The Energy Program had a busy year hosting events. In Sydney in August, 2013, the then Climate Change Minister Mark Butler set out the Rudd Government’s strategy for meeting its emissions reduction targets by 2020. The then Shadow Minister for Climate Action, Greg Hunt, set out the Opposition’s climate change strategy in two events in Melbourne in July and Adelaide in August.

In July 2013, Mary Nichols, Chairman of the California Air Resources Board, talked with former federal climate change adviser Ross Garnaut and Tony Wood in Melbourne about the successful launch of the California carbon market and how it intersects with emissions trading schemes elsewhere.

**Health**

The September 2013 report, *Access all areas: new solutions for GP shortages in rural Australia*, showed that more than a million Australians living in rural and remote areas are denied the access to basic medical care that most city dwellers take for granted. People in rural areas with low access to GPs are more likely than other Australians to face serious health risks. Inability to get care is likely to cost the taxpayer much more in the long-run than are the changes proposed in this report.

In November 2013, on the day that the Commonwealth Government’s price disclosure policy saw the price of seven medicines drop, Grattan Institute’s report, *Poor pricing progress*, explained why prices are still not falling far or fast enough, and taxpayers are paying more than $1 billion too much as a result. Even after these reductions, Australian prices for seven major drugs are still on average 14 times higher than prices for the same medicines in the United Kingdom.

A better pricing system for public hospital treatment would show where costs are too high, and free up $1 billion for more and better health care, according to the March report, *Controlling costly care: a billion-dollar hospital opportunity*. Hospital spending is the fastest growing area of government spending, and is projected to increase with new technologies and an ageing population. Rooting out inefficiencies in the public hospital system is an important means of keeping health care affordable and the health budget under control.

In the April 2014 report, *Unlocking skills in hospitals: better jobs, more care*, Health Program Director Stephen Duckett and Health Fellow Peter Breadon found that enabling less highly-trained hospital workers to play a bigger role could improve jobs for doctors and nurses.

The report suggests three ways that hospitals can get a better match between workers and their work. Nursing assistants could free up nurses’ time by providing basic care to patients. Specialist nurses could free up doctors’ time by doing
common, low-risk procedures now done by doctors. More assistants could be employed to support physiotherapists and occupational therapists. The first two of these alone would save public hospitals $390 million a year and fund treatment for almost 80,000 more people.

**Higher Education**

In the July 2013 report, *Taking university teaching seriously*, Higher Education Program Director Andrew Norton examined how a lot of time, money and talent are wasted when about a quarter of students going to university on lower entry scores never complete their degrees. One vital response is to improve the quality of teaching, which has long been neglected in Australian universities. A new scheme to create 2500 teaching-focused positions across 12 universities would double the number of such positions in Australia and begin to spread a culture of high-quality teaching in higher education.

Andrew Norton’s short report of August, 2013, *Keep the caps off! Student access and choice in higher education*, urged the Rudd Government to reject any plan to end its university open access policy.

Similarly, when new Education Minister Christopher Pyne questioned the demand-driven system of university entry, Andrew Norton wrote pieces for *The Sydney Morning Herald* and *The Conversation* challenging the view that uncapped enrolment favours student quantity over quality.

The April report, *Doubtful debt: the rising cost of student loans*, argued that a few modest reforms could radically improve HELP’s finances and free up money for teaching and research, without creating hardship for graduates or their families. If the Government recovered outstanding student loans from deceased estates and people living overseas, it could save more than $800 million every year by 2017. And in a piece for *The Drum*, Andrew Norton argued that selling student debt would be a bad deal for taxpayers.

**Productivity Growth**

The July 2013 report, *The mining boom: impacts and prospects*, examined the fears some Australians have about the potential adverse consequences of the 10-year mining boom. The news is better than they think. Concerns about the damage caused by the high dollar, the impact of the boom on non-mining regions and the risk Australia will turn into a quarry economy are understandable, but the evidence does not bear them out.

Australians are paying up to three times more than they should in superannuation fees. Change could save them $10 billion a year while also saving taxpayers from excessive pension payments, according to Grattan’s April report, *Super sting: how to stop Australians paying too much for superannuation*.

The report by Productivity Growth Program Director Jim Minifie argued that the superannuation system is poorly designed and the high fees are opaque to most account holders. He recommended two complementary reforms to force down fees and save account holders up to $250,000 over the course of a lifetime.
How good is Australia at spreading smart ideas? A panel sponsored by Grattan Institute and Google in November, 2013, examined how policy makers can help the market adopt, adapt and spread innovation. Jim Minifie was joined by Dr Mark Matthews, Executive Director of the HC Coombs Policy Forum at the Crawford School of Public Policy, Brad Krauskopf, CEO of Hub Australia and Australia’s Small Business Ambassador 2013, and Iarla Flynn, Head of Public Policy at Google Australia.

Much innovation is led by entrepreneurs scattered across the economy. In a Grattan discussion paper, The silver lining: cloud computing and small and medium enterprises, Jim Minifie looked at what unites and holds back our disparate innovators, and what policymakers can do to help the lucky country make its own luck.

School Education

The July 2013 report, The myth of markets in school education, showed that policy makers who focus on competition among schools as a way to produce better results ignore the fact that at least 40 to 60 per cent of schools face no or very limited competition, and there is very little government can do about it.

Some of Australia’s most troubled schools are turning around their performance to achieve remarkable results and serve as a model for low-performing schools across the country. The February report, Turning around schools: it can be done, examined two primary and two secondary schools to show that all of them have succeeded by following the same five steps.

Above all, schools must make time in their day to help teachers develop or Australia will continue to slide in international school education rankings. The world’s highest-performing school systems provide time for teachers to be mentored, research best practice, have their classes observed and receive constructive feedback on their performance. Australian school systems and schools, by contrast, are struggling to allocate the time and resources needed to put teaching and learning first.

The Making time for great teaching report, published in March, followed up the Turning around schools report by examining the timetables and budgets of six diverse schools across the country to identify ways they can change their practices in order to free up time for teacher development. It recommended, among other options, that schools reduce teacher presence at meetings and assemblies, extracurricular events and professional development days that do not improve teaching.

After four and half years as School Education Program Director, Ben Jensen resigned in March to take up a new role working directly with schools to implement the reforms he has researched over his time at Grattan Institute.
Communications

Grattan Institute is committed to presenting rigorous policy thinking and complex ideas in a clear and compelling fashion. We work hard to expose our work to the widest possible audience of policy-makers and the public. We have strong relationships with electronic, print and online media. Over the financial year Grattan Institute was mentioned in the media nearly 27,000 times, 4000 more than last year.

Grattan Institute’s website was visited 228,000 times this financial year (last year 145,000). Visitors viewed more than 685,000 pages (last year 490,000) and downloaded reports 58,000 times (last year 30,000).

The number of people on our mailing list has grown to more than 12,000. Grattan Institute also continues to build its profile on social media, with 7226 followers on Twitter (last year 4594) and 2305 likes on Facebook (last year 1601).

Grattan Institute communicates directly to the public through speeches and public seminars. Over the year, Grattan Institute held 23 public seminars attended by approximately 3000 people. Podcasts and transcripts for most seminars are published on Grattan Institute’s website.

Grattan Institute also works to influence policy makers. Program Directors and other staff are continually extending their professional networks to include more public sector officials, Ministers and Shadow Ministers in all States. These and other stakeholders are routinely consulted for comment as our work is developed, and after it is released publicly.

Staff

Grattan Institute appointed seven new staff during the financial year, closing the year with 24 staff members. Eighteen interns were also employed at different times, contributing to specific projects and programs, and gaining opportunities for their own development. The strong demand for advertised roles at Grattan Institute confirms our position as a highly sought-after employer.

Major Reports

Grattan Institute published 17 major reports during the financial year. These reports were downloaded from our website 33,810 times over the year.

Budget Priorities

Balancing budgets: tough choices we need
Author: John Daley
Published: 24 November 2013
Governments face deficits of up to $60 billion a year by 2023 unless they take brave decisions to balance budgets. Here is a way to do it.

**Budget pressures on Australian governments 2014**
Author: John Daley and Cassie McGannon
Published: 4 May 2014

Rising health, pension and infrastructure spending will force Australian governments to find savings and tax increases of $70 billion a year by 2024 to balance their budgets. Tough choices are needed.

**Cities**

**Renovating housing policy**
Author: Jane-Frances Kelly
Published: 20 October 2013

Government tax and welfare policies are worsening the divide between those who own homes and those who do not. Housing policy is overdue for a major renovation to create more productive cities and a fairer Australia.

**Energy**

**Shock to the system: dealing with falling electricity demand**
Author: Tony Wood and Lucy Carter
Published: 10 December 2013

Australians are using less power but paying more for it. A nasty correction looms, and change requires wholesale reform of the electricity market.

**Health**

**Access all areas: new solutions for GP shortages in rural Australia**
Author: Stephen Duckett and Peter Breadon
Published: 29 September 2013

More than a million Australians in rural and remote areas lack access to basic medical care. The solution is relatively simple and cheap, if policymakers adopt new responses to an old problem.

**Poor pricing progress: price disclosure isn’t the answer to high drug prices**
Author: Stephen Duckett and Peter Breadon
Published: 1 December 2013

Prescription drug prices are falling, but not far or fast enough. It is time the Government got smart, looked at prices overseas, and saved Australians more than $1 billion a year.
Controlling costly care: a billion-dollar hospital opportunity
Author: Stephen Duckett and Peter Breadon
Published: 4 March 2014

A new pricing system for hospital treatment could end unjustified cost differences among hospitals and free up $1 billion for more and better health care.

Unlocking skills in hospitals: better jobs, more care
Author: Stephen Duckett and Peter Breadon
Published: 13 April 2014

A better match between hospital workers and their skills could improve jobs for doctors and nurses, save public hospitals nearly $430 million a year and fund treatment for more than 85,000 extra people.

Higher Education

Taking university teaching seriously
Author: Andrew Norton
Published: 21 July 2013

Australian universities undervalue teaching. As the number of students expands toward 40 per cent of young people, it’s time to give university teaching the priority it deserves.

Keep the caps off
Author: Andrew Norton
Published: 6 August 2013

The Government should reconsider any plan to end its university open access policy. For a small saving, the change would reduce the number of students from disadvantaged backgrounds, hurt university innovation and shrink the supply of graduates into areas of shortage.

Doubtful debt: the rising cost of student loans
Author: Andrew Norton
Published: 6 April 2014

By 2017 the Government will have $13 billion of student loans on its books that it does not expect to collect. With modest reforms it could recoup $800 million a year while still meeting the loan scheme’s goals.
Productivity Growth

The mining boom: impacts and prospects
Author: Jim Minifie
Published: 28 July 2013

The economic benefits of Australia’s 10-year mining boom far outweigh the costs, but the Federal Government has not saved enough of the boom’s proceeds to safeguard future Australian budgets.

Super sting: how to stop Australians paying too much for superannuation
Author: Jim Minifie
Published: 27 April 2014

Australians are paying up to three times more than they should in superannuation fees. Change could save them $10 billion a year.

The silver lining: cloud computing and small and medium enterprises
Author: Jim Minifie
Published: 10 June 2014

Small businesses are often slow to take up innovation, but cloud computing and other online technologies give them a chance to thrive.

School Education

The myth of markets in school education
Author: Ben Jensen
Published: 10 July 2013

Australia has led the world in giving schools more autonomy and trying to increase school competition. But these policies are not the best way to lift student performance.

Turning around schools: it can be done
Author: Ben Jensen
Published: 21 February 2014

Some of Australia’s most troubled schools are turning around their performance. They are a model for low-performing schools across the country.

Making time for great teaching
Author: Ben Jensen
Published: 14 March 2014

To arrest our slide in global school rankings, Australian schools need to make time for proper teacher development. Most are struggling to do so. This report shows how it can be done.

Private Events and Seminars

Grattan Institute held 47 private seminars over the financial year.
Grattan Staff

Grattan Institute ended the 2013-14 financial year with the following staff:

John Daley, Chief Executive Officer

Andrew Norton, Program Director, Higher Education
Jane-Frances Kelly, Program Director, Cities
Jim Minifie, Program Director, Productivity Growth
Stephen Duckett, Program Director, Health
Tony Wood, Program Director, Energy

Peter Breadon, Fellow, Health
Lucy Carter, Fellow, Energy
Cassie McGannon, Fellow Budget Priorities

Paul Donegan, Senior Associate
Jordana Hunter, Senior Associate
James Savage, Senior Associate

Tim Cameron, Associate
Ittima Cherastidtham, Associate
Cameron Chisholm, Associate
Danielle Romanes, Associate
Cameron Harrison, Associate

Eloise Shepherd, Executive Assistant
Ana Passaportis, HR Manager
Andrew McDonald, Corporate Services Manager & Company Secretary
Emma Turner, Finance and Officer Coordinator
James Button, Manager, Communications
John Harris, Manager, Strategic Communications
Alex Stott, Events Coordinator
